

NLP HW 2

B. Problems:

Accepted strings = $ab, abab, aab, aabab, \dots$

$$RE = (ab | aab)(ab | aab)^*$$

Accepted strings = $ab, aba, abab, abaab, \dots$

$$RE = (ab | aba)(ab | aba)^*$$

2. Bigram Probabilities

Input Sentence = "The standard Turbo engine is hard to work"
(S)

$$\begin{aligned} i) P(S) &= P(\text{The}) \times P(\text{standard} | \text{The}) \times P(\text{Turbo} | \text{standard}) \times P(\text{engine} | \text{turbo}) \\ &\quad \times P(\text{is} | \text{engine}) \times P(\text{hard} | \text{is}) \times P(\text{to} | \text{hard}) \times P(\text{work} | \text{to}) \\ &= \frac{3676}{68737} \times \frac{3}{3676} \times \frac{2}{10} \times \frac{0}{2} \times \frac{0}{17} \times \frac{0}{447} \times \frac{3}{4} \times \frac{7}{1551} \end{aligned}$$

No smoothing = 0

ii) Laplace smoothing (Add one)

$$P(\text{Sentence}) = P(\text{The}) \times P(\text{standard}|\text{The}) \times P(\text{Turbo}|\text{standard}) \\ \times P(\text{engine}|\text{Turbo}) \times P(\text{is}|\text{engine}) \times P(\text{hard}|\text{is}) \\ \times P(\text{to}|\text{hard}) \times P(\text{work}|\text{to})$$

$$= \frac{3676}{68737} \times \frac{(3+1)}{(3676+7602)} \times \frac{(2+1)}{(10+7602)} \times \frac{(0+1)}{(2+7602)} \times \frac{(0+1)}{(17+7602)}$$

$$\times \frac{(0+1)}{(447+7602)} \times \frac{(3+1)}{(4+7602)} \times \frac{(7+1)}{(1551+7602)}$$

$$= 7.368E-27$$

iii) Good Turing Smoothing

$$P(\text{Sentence}) = P(\text{The}) \times P(\text{standard}|\text{The}) \times P(\text{Turbo}|\text{standard}) \\ \times P(\text{engine}|\text{Turbo}) \times P(\text{is}|\text{engine}) \times P(\text{hard}|\text{is}) \\ \times P(\text{to}|\text{hard}) \times P(\text{work}|\text{to})$$

$$= \frac{3676}{68737} \times \frac{(3+1) \times \frac{1363}{1813}}{66517} \times \frac{(2+1) \times \frac{1813}{6376}}{66517} \times \frac{16520}{66517}$$

$$\times \frac{16520}{66517} \times \frac{16520}{66517} \times \frac{(3+1) \times \frac{1363}{1813}}{66517} \times \frac{(7+1) \times \frac{184}{205}}{66517}$$

$$= 2.318E-21$$
